## Staff Report

Item #  
4C

**To: Lemoore City Council**  
**From: David Wlaschin, Public Works Director**  
**Date: November 2, 2006**  
**Subject: Bid Award – Hypo Chloride System and Header Pipe Replacement**

---

**Background:**

This project converts the existing chlorine gas systems, which are located at Well No. 10 adjacent to the Municipal Complex on West Cinnamon Drive and at the north well field, to a liquid system. The system is used to eliminate hydrogen sulfide odor and improve color of well water.

The second portion of this project is the replacement of the header pipe which takes water from the two one-million gallon water tanks at 40 'G' Street and places it into the distribution system. This header pipe was constructed in 1972 when the system was constructed and is showing fatigue.

This project is scheduled to take place this winter while our water usage is down and we will be able to operate with our other City wells.

Only one bid was received at the bid opening held on Thursday, November 2, 2006 which Staff is currently reviewing.

**Recommendation:**

Due to the amount of the bid received, staff will have a recommendation for Council on Tuesday, November 7, 2006.
