PRESS RELEASE

The City of Lemoore has teamed up with Full Circle Renewables to coordinate the installation of solar photo-voltaic arrays on land owned by the City of Lemoore at the waste water treatment plant and the well field north of the City.

The only role the City of Lemoore will have in this project is the lease of the land. The solar arrays would be constructed, maintained, and utilized by Full Circle Renewables and its investors. The City will not see any energy savings from this project.

The 23 acres at the waste water treatment plant and the 80 acres at the north well field site do not currently generate any income for the City. The lease of these properties for the solar photovoltaic installations will generate \$19,550 and \$68,000 for the sewer and water funds, respectively.

“We are excited that the City of Lemoore has agreed to lease these properties to FCR”, stated Jim Quan, CEO and Managing Partner of Full Circle Renewables. “In doing so, the City of Lemoore helps to improve the sustainability of their local and regional economies with jobs and revenues from these projects.” City of Lemoore Mayor John Murray added, “I am very pleased that this project has come to fruition and I think that this is a great opportunity to generate revenue and at the same time cooperate in the effort to promote renewable energy.”

Full Circle Renewables is an energy project development company focused on medium to large energy project opportunities and is currently developing several utility scale energy projects.
